WATER TREATMENT  
Page 1

# PRODUCT LIST

## BOILER & COOLING WATER COMPOUNDS

### NO. 20 BOILER COMPOUND

A balanced treatment containing sulfites for hot water boilers and closed systems. S743

### NO. 25 BOILER COMPOUND

A balanced treatment containing nitrites for hot water boilers and closed systems. S744

### NO. 30 BOILER COMPOUND

This is a concentrated balanced boiler compound for treating low-pressure steam boilers. S745

### NO. 34 BOILER COMPOUND

A molybdate-based, balanced boiler compound designed to provide scale and corrosion protection for closed chilled-loop, hot water systems and steam boilers. S746

### NO. 38 BOILER COMPOUND

A molybdate and nitrite-based boiler compound that will prevent scale and corrosion while establishing a protective film in hot water boilers and closed systems. S747

### NO. 45 CORROSION INHIBITOR

A neutralizing, amine-based product that will protect against rust, pitting and corrosion in steam and steam condensate lines. Normally used with No. 30 or No. 34 Boiler Compounds. S748

### NO. 98 COOLING WATER COMPOUND

A concentrated corrosion and scale preventative compound for cooling towers and condenser feed water. It is ideally suited for use in open recirculating cooling towers. It contains anti scaling agents, cathodic and anodic inhibitors and will prevent corrosion of both steel and soft metals. It allows high cycles of concentration by controlling alkalinity. S755

### NO. 87 COOLING WATER COMPOUND

A concentrated corrosion and scale preventative compound ideally suited for open recirculating cooling towers. S756

### COOLING WATER COMPOUND - AIR

Formulated in compliance with Alberta Infrastructure Regulations for cooling towers. It is a concentrated corrosion and scale preventative compound for cooling towers and condenser feed water, ideally suited for use in open recirculating cooling towers. S754

### GLUTICIDE 15

A microbicide for controlling slime-forming bacteria, sulfate-reducing bacteria and algae in air washers and recirculating cooling water systems; service water and auxiliary systems; heat transfer systems. PCP# 31043. S757

### B-10 BIOCID

A broad spectrum anti-bacterial product for use in a variety of applications including cooling towers, crude oil storage tanks, closed heating and cooling loops, fuel storage tanks, humidification spray pans and water disposal wells. PCP# 21153.18 S759

### OS-15 OXYGEN SCAVENGER

A concentrated sodium sulfite solution used to reduce oxygen in feed water for steam boilers and other water treatment applications. S760

### OS-100 OXYGEN SCAVENGER

A catalyzed, concentrated, sodium sulfite product for rapid oxygen reduction in steam boilers and other water treatment applications. S761

WATER TREATMENT  
Page 2

# PRODUCT LIST

## BD-86 DETERGENT DEGREASER

A concentrated, non-foaming, non-phosphate detergent-degreaser for cleaning boilers. It contains silicates and is ideal for the removal of residues often found in new boiler installations. S766

## NEUTRAL BOILER CLEANER

A water softening detergent with a pH of 7.5 to 8 designed for degreasing and cleaning aluminum boiler systems. S765

## SP-50 POWDERED BOILER COMPOUND

A balanced treatment containing sulfites to protect against scale and corrosion in boilers. It is ideal for food plant use. S763

## NO. 10 BOILER COMPOUND

A concentrated, highly alkaline, non-freezing corrosion preventative boiler compound for oil patch use. S762

## ALUM BOILER TREATMENT - NITRITE

A nitrite-based boiler compound with a controlled pH of 8 for the treatment of aluminum boiler systems that operate at pressures of less than 900 psi. S773

## PBT-20 POLYMER BOILER TREATMENT

A scale-conditioning additive that will inhibit the formation of hard scale deposits. It is ideally suited for use with other additives in larger boiler systems. S772

## E-40 BOILER WATER BLEND

A full strength, chelating agent to control hardness and heavy metal ions in larger boiler systems. S768

## PD-90 LIQUID PHOSPHATE DISPERSANT

This product is a phosphated product used for preventing scale in boilers and feed lines by sequestering calcium and magnesium complexes. It is also an excellent corrosion protection additive especially when used with an alkaline boiler compound. S770

## DESCALING PRODUCTS

### NO. 110 DESCALER

A fully inhibited, fast-acting descaler for boilers and cooling systems containing hydrochloric and phosphoric acids. S750

### MURIATIC ACID

A highly concentrated, inhibited acid for descaling and rust removal of boilers, water-cooled equipment, water jackets, heat exchangers and heating coils. S753

### NO. 125 BOILER CLEANING COMPOUND

A cleaner-descaler designed for cleaning small industrial and residential heating systems. S751

### DESCALER 140

A dry, odorless, crystalline, inhibited acid cleaner that can safely be used on all metals commonly encountered in acid cleaning. S752

### 15% SULPHAMIC ACID DESCALER

A clear and colorless liquid sulphamic acid descaler that is ideal for use in industrial applications. This odorless organic descaler can be safely used on all metals commonly encountered in acid cleaning and is significantly less corrosive than typical mineral acid descalers. Sulphamic acid is safe to use around chlorine as it will not liberate toxic chlorine gas. S769
